bridge using a native protocol to the central processing unit, and wherein the bus is contained on the substrate.

6. Claim 14 recites the following subject matter which, in combination with the rest of the claim, is not taught by the closest prior art: a central processing unit operable to execute operational instructions, wherein the central processing unit includes an arithmetic logic unit interoperably coupled with a data module, an instruction module via a native bus having a native CPU bus rate wherein the central processing unit issues, using a native protocol to the central processing unit, the memory access request when information relating to executing one of the operational instructions is not stored within the data module or the instruction module, and wherein the central processing unit is contained on the substrate; and a bus operably coupled to the central processing unit and the north bridge, wherein the bus provides a transport medium for memory access requests and corresponding memory responses between the central processing unit and the north bridge at the native CPU bus rate using a native protocol to the central processing unit, and wherein the bus is contained on the substrate.
